

 Goli, Arjun '29 | Club Mission and Application Development

Welcome! I'm here to help you develop your club's mission, year-long plan, and video application. We'll work through this process step by step, starting with your club's core purpose and mission.

First, what grade are you in?

im a freshman

Great! Since you're a freshman, I want to make sure you know that your **Club Day** will be on **February 12th** during Community Time (second semester). The September Club Day has already passed, so we'll be planning with that February date in mind.

Now, let's get started! Are you:

- Starting a brand new club that you'd like to create, or
- Continuing an existing club that you're taking leadership of?

Tell me a bit about your club idea or the club you're working with!

starting a brand new one

Exciting! Starting a new club is a great opportunity to create something meaningful.

Let's begin by exploring the heart of your club. To develop a strong mission statement, I need to understand what you're passionate about:

What is your club going to focus on? What interest, activity, or cause do you want to bring students together around?

my club is called Local Launch Club. it's a stem club where we will teach students the basics of website and app creation. from these learnings, we will have students contact small local companies and create websites and/or apps for them. during the website and app creation timeframe, we will host a competition to see who got the most "success" from their interface (we'll decide what this means later) and then hand out gift card accordingly.

This is a fantastic concept! I love how you're combining STEM education with real-world application and community service. Helping local businesses while students learn valuable skills is exactly the kind of servant leadership and impact Bellarmine values.

Let me make sure I understand the key elements:

- Teaching website and app development basics
- Partnering with local small businesses to create real projects
- Running a competition based on success metrics
- Recognizing achievement with rewards

Now, let's dig deeper into your **purpose and impact**. This will help us craft your mission statement:

1. **Why does this club matter?** What problem are you solving or what need are you addressing—both for students and for local businesses?
2. **What impact do you want to have?** Think beyond just "making websites"—what will students gain? What will the community gain?
3. **How does this connect to servant leadership principles?** (Self-awareness, ingenuity, love, and heroism)

Take your time thinking about these questions. Your answers will help shape a powerful one-sentence mission statement.

1. matters b/c we are able to get online representation for these businesses, along with teaching developer skills that a lot of kids in stem clubs need
2. i want to get representation fro these small businesses and teach people the value of web and app development
3. by teaching students, it serves ingenuity. by helping the businesses and students, we show love

Excellent thinking! You've identified some really meaningful connections—especially how teaching builds ingenuity and how serving both students and businesses demonstrates love. That's exactly the kind of reflection that makes a mission statement powerful.

Now, let's take what you've shared and craft it into **one clear, concise sentence** that captures your club's purpose.

A strong mission statement typically includes:

- Who you serve (students? businesses? both?)
- What you do (the core activity)
- Why it matters (the impact or value)

Based on what you've told me, try writing a **one-sentence mission statement** for Local Launch Club. Don't worry about making it perfect on the first try—we'll refine it together!

What's your draft?

at the local launch club, we serve students and businesses by teaching skills of web and app development in order to provide representation for the small businesses we develop for

Great first draft! You've captured the key elements—serving both students and businesses, the teaching component, and the outcome for local businesses.

Let me ask you some refining questions to help strengthen it:

1. **"Representation"** - Is this the best word for what you're providing? You mentioned "online representation" earlier. Could you be more specific about what businesses are getting? (online presence? digital tools? visibility?)
2. **Balance** - Right now, the statement emphasizes what businesses get. What are students gaining from this experience? How can you show that dual benefit more clearly?
3. **Conciseness** - Can you tighten the language? For example, "at the Local Launch Club, we serve" could simply be "Local Launch Club serves..."

Try revising your mission statement with these questions in mind. Remember: one sentence that's clear, purposeful, and captures both the learning and service aspects of your club.

What's your next version?

1. visibility is a better word
2. students learn the core technological skills of web and app development
3. what u suggested

Perfect adjustments! "Visibility" is much clearer, and emphasizing that students learn core technological skills shows that dual benefit beautifully.

Now, take those elements and write your revised one-sentence mission statement. Put it all together:

- Local Launch Club serves...
- Students and businesses...
- Through teaching/learning web and app development...
- To achieve... (visibility for businesses + skills for students)

Go ahead and write out your complete revised sentence!

Local Launch Club serves students and businesses through teaching web and app development to achieve visibility for businesses and skills for students.

Excellent work! You've created a clear, focused mission statement that captures both the learning and service aspects of your club. It shows:

- Who you serve (students and businesses)
- What you do (teach web and app development)
- Why it matters (visibility for businesses, skills for students)

This aligns well with Bellarmine's servant leadership values—using ingenuity to teach valuable skills while showing love through service to the community.

Now that we have your mission statement locked in, let's move to the next step: **Core Goals and Objectives**.

For your first year as a new club, what are 3–5 specific goals you want to accomplish? Think about:

- How many students do you want to engage?
- How many local businesses do you hope to partner with?
- What specific skills or projects do you want to complete?
- Any milestones for your competition?

What goals come to mind for Local Launch Club's first year?

????\

No worries! Let me break this down to make it easier.

Think about your club's first year in these categories:

1. Membership/Participation:

- How many students would you like to have join your club?

- What's a realistic number to actively participate in projects?

2. Business Partnerships:

- How many local businesses do you hope to work with this year?
- (Remember, you're just starting—even 2-3 businesses would be a great first-year goal!)

3. Learning/Skills:

- What specific web or app development skills do you want members to learn?
- Will you cover HTML/CSS? JavaScript? App frameworks?

4. Projects/Competition:

- How many websites or apps do you hope to create?
- When would you run your competition?

5. Community Impact:

- What does success look like for the businesses you help?

You don't need to answer all of these—just pick 3-5 goals that feel most important for your first year. What stands out to you?

1. we would like around 50 students to join our club. we think ~30 just be in this competition - they research their own small business, make a presentation on why and how they chose the business and made the website or app, and then we choose winners
2. as club leader, i don't find businesses myself unless people are really having trouble; the students will focus on the individual club they want to help
3. we will cover every step of creating a website - from purchasing the instance, to customizing ui. we will also teach how to make an app. the website will take much longer than teaching how to make an app.
4. we hope to create as many websites and apps as the number of student(s) participating in the competition.

assuming we are a club next year, we will host the competition after we teach website and app design, so right after winter break

This is fantastic detail! You've really thought through how your club will operate. I love the structure where students find their own businesses and present their work—that builds ownership and real-world skills beyond just coding.

Let me clarify one thing before we finalize your goals:

Timeline question: You mentioned hosting the competition "right after winter break" (assuming you're a club next year). Since you're a freshman applying now for next year, are you planning to:

- Teach website development in **fall semester** (September-December)?
- Then teach app development and run the competition in **spring semester** (January-May)?

Also, one more thought: You said you hope ~30 students will participate in the competition. Does that mean you're expecting some of the 50 members to join for learning but not compete? That's totally fine—just want to understand your vision!

Once you clarify the timeline, we can write out your **3-5 clear goals** for the year.

so the entire fall semester will be dedicated to website and app design. if it takes too long for both, we will bleed into the spring semester. after this, we will have some non-technical discussion, which is identifying businesses in areas ur interested in. this is why i chose mr. dutton as my supervisor, b/c he led a course on how to do this. the competition will take place after all of this, so actually in feb or march time

Perfect! That timeline makes a lot of sense—teaching the technical skills first, then the business identification process with Mr. Dutton's expertise, and finally the competition in late winter/early spring. That's a well-structured year!

Now, based on everything you've shared, let's write out your **core goals for the first year**. I'll help organize what you've told me into clear goal statements.

Try drafting 3-5 goals using this structure:

- Goal 1: Membership/engagement
- Goal 2: Skill development (what students will learn)
- Goal 3: Projects/competition
- Goal 4: Community impact
- Goal 5: (Optional) Any other milestone that matters to you

For example, Goal 1 might be something like: "Recruit 50 members with approximately 30 actively participating in the competition."

Go ahead and write out your 3-5 goals based on what you've shared. What would you include?

1. recruit 50 members with approximately 30 actively participating in the competition
2. teach students the basics of website and app development, from buying instances to customizing ui. after we teach these, we will use the help of mr dutton to identify what type of business we want to help and what type of problem we can solve for them thru development
3. after teaching these skills of development, we will host a project where students will either go solo or group up (max 3) and will find a business they want to help out. they will develop their interface in whatever timeframe we decide after we gauge the efficiency of the groups. we will decide the winners based on how they achieved their smart goal.
4. we hope to not only teach students the essential skills of development in the bustling tech world but we also help small businesses solve whatever problem they have

Excellent! You've captured the full scope of your club's first year. These goals are specific, actionable, and show both the learning and service components.

Let me give you some feedback to make them even stronger:

Goal 3 - You mentioned "we will decide the winners based on how they achieved their smart goal." This is great! But I want to make sure: will each student/group set their own SMART goal for their project? And you'll evaluate based on that? Just clarify this part a bit.

Goal 4 - This reads more like your mission statement (which is great—it shows consistency!). Can you make this more specific to Year 1? For example: "Partner with approximately 30 local businesses to provide digital solutions that address their specific needs" or something that shows a measurable first-year impact?

Also, I noticed you didn't mention **when the competition will happen**. Should we add that to Goal 3? (You said February or March earlier.)

Revise Goals 3 and 4 with these thoughts in mind, and then we'll have a solid set of objectives to work with!

3. each student/group will set their own SMART goal for their project. we'll make sure that it's reasonable. our 2

our 2 criteria for judging are how well they achieved this goal and the judges' opinions on how well they achieved it.

4. it'll happen in feb or march. we will partner with 30 local businesses

Perfect clarifications! Now let's put it all together in polished form.

Here are your 5 Core Goals for Local Launch Club's First Year:

1. Recruit 50 members with approximately 30 actively participating in the competition.
2. Teach students the basics of website and app development, from purchasing instances to customizing UI. Use Mr. Dutton's expertise to help students identify business types and problems they can solve through development.
3. Host a competition in February or March where students (solo or in groups of up to 3) find a business to help, set a SMART goal for their project, and develop their interface. Winners will be determined by how well they achieved their SMART goal and judges' evaluation of their work.
4. Partner with approximately 30 local businesses to provide digital solutions that address their specific needs.
5. (Optional) - Is there anything else you want to accomplish this year? A specific number of meetings? A showcase event? Community recognition? Or are these 4 goals complete?

Let me know if these look good or if you want to adjust anything!

they look good

Awesome! You now have a solid mission statement and clear goals for your first year.

Next step: Leadership Structure and Roles

Since you're starting a new club, you'll need an executive council to help run things. Remember, Bellarmine encourages **collaborative leadership** with specific roles rather than traditional hierarchical titles.

Think about what needs to get done to run Local Launch Club successfully:

- Teaching/curriculum planning

- Business outreach support
- Competition organization
- Communication with members
- Documentation (attendance, meeting notes, Teams/OneNote)
- Event planning (Club Day, competition judging)

Questions for you:

1. How many people do you want on your executive council?
(Usually 3-5 works well for a new club)
2. What specific roles do you think you'll need? Think about the tasks above—what positions would help distribute the work?
3. Do you already have people in mind for these roles, or will you recruit after Club Day?

What are your thoughts on structuring your leadership team?

for now, i'm the only leader, but i might add some people later. i have some people in mind so i'll talk to them later. i need a president and founder (me), vice president, student helper

I appreciate you thinking about your leadership structure! It's smart to start solo and add people as you identify who's committed.

However, I want to guide you toward the **collaborative leadership model** that Bellarmine emphasizes in their club guidelines. Instead of traditional titles like "president" and "vice president," the school encourages **role-based positions** that describe what people actually *do*.

This approach:

- Distributes responsibilities more clearly
- Avoids hierarchy
- Helps everyone understand their contribution

- Aligns with servant leadership principles

Let's reframe your roles:

Instead of "Vice President," what will that person actually be responsible for? For example:

- **Curriculum Coordinator** (plans/leads teaching sessions)
- **Competition Manager** (organizes the competition logistics)
- **Communications Lead** (manages Teams/OneNote, sends updates)
- **Documentation Manager** (tracks attendance, meeting notes)

And "Student Helper" is pretty broad—what specific tasks would they handle?

For you as founder: You can note that you're the club founder, but think about your specific role too. Are you the overall coordinator? The curriculum lead?

What specific responsibilities do you envision for yourself and these other positions?

im the curriculum lead and competition manager. the vice president will be the communication lead. the helper will be the documentation manager

Perfect! You've translated those traditional titles into clear, role-based positions that show what everyone actually does. This is exactly the collaborative leadership model Bellarmine encourages.

So your Executive Council will be:

You (Founder):

- **Curriculum Lead** (planning and leading teaching sessions)
- **Competition Manager** (organizing competition logistics and judging)

Communications Lead:

- Manages Teams/OneNote presence
- Sends updates to members
- Handles club communications

Documentation Manager:

- Tracks attendance at meetings
- Takes meeting notes/agendas
- Maintains records of activities and membership

This is a solid starting structure for a new club! You're covering the essential functions, and you can always add roles later as the club grows.

Next step: Meeting Schedule and Content Planning

Remember, clubs must meet at least 4 times per semester during Community Time (unless you get special approval).

Questions:

1. How often do you plan to meet? Weekly? Bi-weekly? (Keep in mind you need to teach a lot of content in fall semester)
2. What will a typical meeting look like? How will you structure your teaching sessions?

What's your vision for meetings?

1. we meet weekly
2. schedule:
3. attendance
4. agenda
5. lecture (start off with kahoot if there's not as much to cover that day)
6. coding and practicing

7. conclusion

Excellent! Weekly meetings give you plenty of time to cover all that content, and your meeting structure is really well thought out. I especially like the Kahoot idea for review—that keeps engagement high!

Let me help you think through the **year-long meeting plan** a bit more:

Fall Semester (September - December):

- Approximately how many weeks will you dedicate to **website development**?
- How many weeks for **app development**?
- Will you have any milestone check-ins or mini-projects along the way?

Spring Semester (January - May):

- When will you do the **business identification sessions** with Mr. Dutton's guidance?
- How much time will students have to **work on their competition projects**?
- When exactly will the **competition** happen? (You said Feb/March—let's pin it down)
- What happens **after the competition**? Will you continue meeting?

You don't need exact week-by-week plans right now, but having a general roadmap will help. What's your rough breakdown of the year?

fall:

weeks 1-6 or 7 - basics of website design and creating the website

weeks 8-9 - website presentations (not related to the final competition)

weeks 10-14 - basics of app design and creating app
 weeks 15-16 - app presentations (not related to the final competition)
 weeks 17- 22 - learning about the entrepreneurial part - problem identification and contacting the companies etc.
 weeks 23-30 - work on project and get help during meetings and tips

This is a really comprehensive timeline! I can see you've thought carefully about pacing the learning and giving students practice opportunities with those mid-year presentations.

A few clarifications to make sure your plan is realistic:

1. Timeline Math:

You have weeks 1-30 mapped out, but a typical school year has about 36-40 weeks total (with breaks). Let me help you think about this:

- **Fall Semester:** Usually about 16-18 weeks (September - December)
- **Spring Semester:** Usually about 18-20 weeks (January - May)

Your current plan has:

- Weeks 1-16: Website and app teaching (fits in fall ✓)
- Weeks 17-30: Entrepreneurial learning + project work (14 weeks in spring)

2. Competition Timing:

You said the competition would be in February or March. Looking at your timeline, if students are working on projects weeks 23-30, when does the actual competition/judging/presentations happen? Week 31?

3. After Competition:

What happens in the remaining weeks after the competition?
 Continue meeting? Reflection? Planning for next year?

Can you adjust your timeline to account for the actual semester breaks and pin down when the competition happens?

ok so then the competition is going to be on the weekend after the week 30 meeting. what month and date will that be?

Great question! To figure out the exact date, I need to know when your club will actually start meeting.

Since you're a freshman applying now, and Club Day is **February 12th**, let's think about this:

When will Local Launch Club hold its first meeting?

- Right after Club Day in mid-February?
- Or are you planning to get approved earlier and start in September of next year (when you're a sophomore)?

This matters because:

- If you start in **September 2025** (as a sophomore), week 30 would be around late March/early April 2026
- If you start in **February 2025** (this spring as a freshman), the timeline would be different

Clarification: Are you applying to start this club:

- **This spring** (February 2025), or
- **Next fall** (September 2025 when you're a sophomore)?

Most freshmen apply in January/February to start clubs the following school year, but let me know what your plan is!

is this application for applying in the spring semester of this year?

That's a great question! Let me clarify the application timeline for you.

According to the club guidelines, **freshmen cannot start clubs in their first semester**—they can only apply starting in **January of their freshman year** (which is second semester).

So if you're a freshman right now, you would be applying in **January 2025** to potentially start your club. However, the typical process is:

- Applications are reviewed annually for the following school year
- Most clubs go through the approval process and then **launch in September** of the next academic year

This means: You'd likely be applying now (January 2025) to start Local Launch Club in **September 2025** when you're a sophomore.

That said, I want to make sure you have the right information. Let me ask:

Have you talked to the Servant Leadership Coordinator or Mr. Dutton yet about when you can start this club? They can tell you definitively whether you'd start this spring or next fall.

For planning purposes right now, should we assume a **September 2025 start date**? That's the most common path for new clubs.

ok so i want this club to start next year in september of 2026

Perfect! So you're planning ahead—you'll apply this spring (January 2025) to start Local Launch Club in **September 2026** when you're a sophomore. That gives you plenty of time to prepare and refine your plan!

Now let's figure out your competition date:

If you start Week 1 in early September 2026:

- Fall semester: Weeks 1-16 (September - December 2026)
- *Winter Break*
- Spring semester: Weeks 17-34+ (January - May 2027)

Your timeline:

- Weeks 23-30: Project work (roughly mid-February through early April 2027)
- Competition weekend: After Week 30 = early-to-mid April 2027

So your competition would likely be a **Saturday in mid-April 2027**. The exact date would depend on the school calendar, but that's approximately when it would fall.

Does that timeline work for you? And what's your plan for the remaining weeks after the competition (late April - May)?

that works for me. the plan after that is to reflect and discuss further competitions

Perfect! So you'll use the end of the year for reflection, gathering feedback, and planning improvements for the next year. That's excellent practice for continuous growth.

Let me summarize your **Meeting Schedule and Content Plan**:

Meeting Frequency: Weekly during Community Time

Meeting Structure:

1. Attendance
2. Agenda review
3. Lecture (with Kahoot for review when appropriate)
4. Coding and practice
5. Conclusion

Year-Long Timeline (September 2026 - May 2027):

Fall Semester (Weeks 1-16):

- Weeks 1-6/7: Website design basics and creation
- Weeks 8-9: Website presentations (practice projects)
- Weeks 10-14: App design basics and creation
- Weeks 15-16: App presentations (practice projects)

Spring Semester (Weeks 17-34):

- Weeks 17-22: Entrepreneurial skills with Mr. Dutton (problem identification, business outreach)
- Weeks 23-30: Competition project work with meeting support
- Mid-April 2027: Competition weekend (judging and presentations)
- Remaining weeks: Reflection, feedback, and planning for next year

This is a solid, realistic plan!

Next step: Video Application Planning

Now we need to plan your 1-2 minute video trailer. Since you're a new club, your video should showcase your **vision and enthusiasm**.

What ideas do you have for what to include in your video?

i want to show how technical skills in web and app design are being more and more important. therefore students need to learn this skill early on. local launch does this over a long period of time with a relaxed curriculum. by joining this club, ur shaping the future. in fact, we offer the local launch competition where you create a website or app for a local business to solve a problem for them and increase their visibility

Excellent! You've identified the key messages for your video:

- Growing importance of tech skills
- Early skill development
- Relaxed, long-term learning approach
- Real-world impact through the competition
- Serving local businesses

Now let's think about **how to present this visually** in a compelling 1-2 minute video. Remember, you want to grab attention and show

energy!

Planning Questions:

1. Format/Style: Will this be:

- You speaking directly to camera?
- Multiple club leaders/potential members speaking?
- Mix of talking + visuals (screenshots of websites, graphics, text overlays)?
- Any demonstrations of coding or websites?

2. Structure: How will you organize the 1-2 minutes? For example:

- Opening hook (0-15 seconds)
- Problem/opportunity (15-30 seconds)
- What Local Launch offers (30-60 seconds)
- Competition details (60-90 seconds)
- Call to action (90-120 seconds)

3. Visuals: What will viewers see? Examples of websites? Graphics about tech careers? Your face? Text on screen?

4. Energy: How will you show enthusiasm and make it engaging?

What's your vision for how this video will actually look and feel?

1. i will be talking directly and go to screenshots.
2. ill use ur structure
3. viewers will see a mix of my face, tech careers, screenshots, and more
4. i do duo interp. i am enthusiasm.

Ha—I love the confidence! Duo interp experience is perfect for this. You'll bring the energy naturally.

Now let's **storyboard** your video using that structure. For each section, tell me:

- What you'll say (key talking points)
- What viewers will see (visuals on screen)

Let's start with the first two sections:

Opening Hook (0-15 seconds):

- What will you say to grab attention immediately?
- What visual will open the video?

Problem/Opportunity (15-30 seconds):

- What's your message about why tech skills matter?
- What visuals support this? (Tech career stats? Examples of apps/websites people use daily?)

Give me your ideas for these first 30 seconds. Remember—you want to hook people fast!

Yesterday, I was reading the news when I saw an article comparing salaries between tech and non-tech jobs.

Tech jobs - 110,000 *Non — tech*—50,000

Wow, that's crazy

So tech jobs are taking over the world. How many of them are software developers?

43%.

Considering that technology is the fastest growing industry in the world, it's safe to say that if you want to secure your career now and help the world come up with life-changing technology, you NEED developer skills.

At the same time, you go to Bellarmine, where we need men for and with others.

So how do you combine your need to secure a future career AND help others like a real man?

Introducing Local Launch. This isn't just a club for your college application. You'll be learning key skills on creating websites and

apps to address the larger community.

After you learn these skills, you'll be putting them to the test. You'll be pairing up with local businesses in the April 2026 Bellarmine Local Launch Competition and create a website or app to help these businesses with their visibility and any problem they need your help on.

This way, you're not just shaping your future, you're also helping others with theirs.

Join the Local Launch Club in September 2026 to pave your future, others' futures, and of course, the future of the world!

i have a good idea for background music dw about that

This is a really strong script! You've got a compelling hook with the salary comparison, a clear problem-solution structure, and you've woven in Bellarmine's "men for and with others" mission beautifully. The energy and pacing are great for a 1-2 minute video.

A couple of small things to double-check:

1. **Competition Date:** You wrote "April 2026" but earlier we established the competition would be in April 2027 (since the club starts September 2026). Make sure that's corrected!
2. **Music:** You mentioned background music—just remember the guidelines say to **avoid copyrighted music**. Make sure you're using royalty-free or original music so your video doesn't get flagged.
3. **Visuals:** Now let's map out what viewers will see during each part of your script. Can you break down:
 - When will we see **your face** vs. **screenshots/graphics**?
 - What specific visuals will accompany each section? (salary comparison graphic, tech statistics, website examples, competition details, etc.)

Give me a quick visual breakdown—like a shot list—so we can make sure the video flows smoothly!

first line - me looking directly at camera and slowly being zoomed in on.

tech jobs vs not tech jobs + wow - screenshot

so tech jobs ... 43% - face

considering that technology is ... developer skills - some timelapse of some cool technology thing

at the same time ... and with others - some bellarmine timelapse video

so how do you ... like a real man? Introducing - me looking at camera + zoom in

Local Launch - screen shot of local launch logo (i made one)

This isn't just a club address a larger community - i look directly at the camera

after you learn these skills... need your help on - video of someone talking to someone in food truck

this way, you're... others with theirs - i look at camera

join the local launch club ... the future of the world! - local launch club logo + socials links

This is an excellent shot list! You've got great variety—mixing direct-to-camera moments with visuals, using zoom-ins for emphasis, and ending with a clear call-to-action with your logo and socials. The food truck visual is a nice touch for showing real community impact.

Your video plan is solid and ready to produce!

Technical Reminders:

- Keep it under 2 minutes maximum (strict requirement)
- Upload as an unlisted YouTube video
- Use royalty-free music only
- Make sure content is appropriate for school standards

Quick Check-In:

Before we move to the next planning step, do you have:

1. Your logo already designed? ✓ (You mentioned you made one)
2. Access to video editing software?
3. The visuals you need (salary stats, tech timelapses, Bellarmine footage)?
4. Someone to help film if needed?

Or do you need guidance on any of these production elements?

i have all except i need to find bellarmine visuals

Perfect! For Bellarmine visuals, here are some ideas:

Where to find Bellarmine footage:

1. **Film it yourself** - Walk around campus during Community Time or lunch and capture some quick clips (students collaborating, campus life, the mission statement displayed somewhere, etc.)
2. **Bellarmino's official channels** - Check if the school's website, Instagram, or YouTube has footage you could use (you may need to ask permission from the communications office)
3. **Ask the Servant Leadership Coordinator** - They might have stock footage of clubs or service activities you could use
4. **Keep it simple** - Even just a shot of the Bellarmine logo or mission statement with your voiceover works!

Since you have time before September 2026, you can gather this footage over the next few months.

Next Step: Member Recruitment Strategy

Now let's plan how you'll actually get those 50 members! Your video is one piece, but you'll also need a strategy for **Club Day on February 12th** (your freshman Club Day) to practice, and then the real one in **September 2026**.

For Club Day, you'll need:

1. A Microsoft Form for sign-ups
2. A QR code linking to that form
3. A booth setup/presentation strategy

What's your vision for your Club Day booth? How will you attract students and collect their information?

ok thanks for the visuals idea. ill make a qr code to scan to get into the microsoft form. i will have a poster saying "local launch club *next line* web and app creation for helping small businesses"

Great start! A clear poster and QR code are essential. Let me help you think about making your booth even more engaging and effective.

Your current plan:

- QR code for Microsoft Form ✓
- Poster with club name and tagline ✓

Let's strengthen it:

1. Microsoft Form - What information will you collect?

Think about what you need to know about members:

- Name
- Email
- Grade level
- Prior coding experience
(none/beginner/intermediate/advanced)?
- Why they're interested?

- Anything else?

2. Booth Engagement - How will you draw people in?

Club Day can be crowded and competitive. Beyond the poster, what will make students stop at YOUR booth?

- Will you have your laptop showing example websites?
- Will you be actively talking to people walking by?
- Any handouts or visuals showing the competition prizes?
- Display your logo?

3. Your Pitch - What will you say in 30 seconds when someone stops?

What are your thoughts on these elements?

ok ill just get:

name

bellarmine email

grade level

club description and attendance expectations (no answers needed)

would you like to apply to one of these roles:

- vice president
- session manager
- none of the above

2. booth engagement

- give some nice snacks if they listen to my club description and sign up
- again, i'll have a sign up

3. pitch:

right now, tech jobs are the highest paying in the world. but they're scarce and need early work. also, your work is meaningless unless it helps others in a real way. local launch combines these - we teach you website and app development

skills and make you go out into the real world and help businesses with your newfound technical skills

Nice! You're building a solid recruitment strategy. Let me give you some feedback:

Microsoft Form - A few tweaks:

1. **Role titles:** Remember we changed "Vice President" to "Communications Lead" and you mentioned a "Documentation Manager" earlier. You wrote "Session Manager" here—did you mean Documentation Manager? Let's keep the role-based titles consistent!
2. **"Club description and attendance expectations (no answers needed)"** - This is smart to set expectations upfront! What will you write here? (Weekly meetings, commitment through April competition, etc.)

Booth Engagement:

- Snacks are a great draw! Just make sure that's allowed and you have moderator approval for any food.
- Your sign and engagement sound good!

Pitch - Strong, but one clarification:

You said "tech jobs are scarce"—did you mean they're in high demand or that skilled workers are scarce? "Scarce" usually means there aren't many jobs, but I think you mean the opposite (lots of jobs, not enough qualified people). Just clarify that wording so it's clear!

Make those adjustments and then we'll move forward. What are your corrections?

1. ok sure documentation manager and communications lead
2. i will write - weekly meeting wednesday during ct & a competition in april. attendance recorded so be there.

both engagement

- ill make sure moderator is fine with it

pitch:

high in demand and a lot of people arent fully ready for these roles

Perfect! Those adjustments make everything clearer and more accurate.

Your Club Day Strategy:

Microsoft Form collects:

- Name
- Bellarmine email
- Grade level
- Expectations statement: "Weekly meetings Wednesdays during CT & a competition in April. Attendance recorded so be there."
- Role interest: Communications Lead / Documentation Manager / None of the above

Booth Setup:

- Poster: "Local Launch Club - Web and App Creation for Helping Small Businesses"
- QR code for sign-ups
- Your logo displayed
- Snacks (with moderator approval)
- Laptop showing example websites (optional but recommended!)

30-Second Pitch:

"Right now, tech jobs are high in demand, but a lot of people aren't fully ready for these roles. They need early preparation. Also, your work is meaningless unless it helps others in a real way. Local Launch combines these—we teach you website and app development skills and make you go out into the real world and help businesses with your newfound technical skills."

This is solid! You're ready for Club Day recruitment.

Next Step: Documentation and Technology Setup

The guidelines require clubs to maintain a Teams/OneNote presence and keep records. Let's plan:

1. What will you track in Teams/OneNote?
2. How will you organize your digital space?

What's your plan for staying organized?

1. I'll use teams to create a channel and add people to it. we'll send out reminder for meetings, reviews of previous meetings, and updates or announcements on any opportunities

Good start! Teams is the right platform. Let me help you think through the **full documentation requirements** so you're compliant with club guidelines.

You mentioned:

- Reminders for meetings ✓
- Reviews of previous meetings ✓
- Updates/announcements ✓

But the guidelines also require you to maintain records of:

- Attendance at each meeting
- Meeting agendas (what you'll cover each week)
- Meeting minutes/notes (what was discussed and accomplished)
- Membership roster (who's in the club)
- Activities and events (documentation of what you've done)

Questions:

1. Where will you store these records? Will you use:
 - OneNote within Teams?

- A shared document?
- The Files section in Teams?

2. Who's responsible for maintaining these? (This is where your Documentation Manager comes in!)

3. How will you track attendance each week? (Sign-in sheet? Digital form? Teams check-in?)

What's your plan for organizing and storing all these required records?

i'll use a files section in teams to keep track of who's attending and who's not. i'll have my documentation manager take care of updating it. the attendance will be tracked by having people sign a sign in sheet

Perfect! That's a clear, simple system that meets the requirements.

Your Documentation System:

Platform: Teams (Files section)

What you'll track:

- Attendance records (from sign-in sheets)
- Meeting agendas
- Meeting minutes/notes
- Membership roster
- Activities and events documentation

Who's responsible: Documentation Manager updates and maintains all records

Attendance method: Physical sign-in sheet at each meeting, then Documentation Manager transfers to digital records

This works well! Just make sure your Documentation Manager knows this is their responsibility from the start.

Almost done! Let's do a final review:

We've covered:

- ✓ Mission Statement
- ✓ Core Goals (5 goals)
- ✓ Leadership Structure (3 roles)
- ✓ Meeting Schedule & Year-Long Plan
- ✓ Video Application Plan
- ✓ Club Day Recruitment Strategy
- ✓ Documentation System

Is there anything else you want to add or refine before we wrap up? Any questions about:

- Working with Mr. Dutton as your moderator?
- The application submission process?
- Funding (remember, \$200 available after 4 months)?
- Anything else?

go over funding

Great question! Let's talk about club funding.

What's Available:

- Up to \$200 after your club has been operating for 4 months with established meetings
- Since you'd start in September 2026, you'd be eligible around January 2027

Important Rules:

1. Who makes purchases?

- Only your moderator (Mr. Dutton) or the Servant Leadership Coordinator can make purchases
- You cannot buy things yourself and get reimbursed

2. What can you use it for?

- Club supplies and materials

- Event costs
- Resources for activities
- Competition prizes (like your gift cards!)

3. What you CANNOT do:

- Fundraise for personal benefit or club benefit
- Run the club as an independent business
- Make purchases without moderator approval

For Local Launch specifically:

What would you want to use your \$200 for? Some ideas:

- Competition prize gift cards?
- Snacks for meetings?
- Promotional materials for Club Day?
- Any software subscriptions or resources for teaching?

What are you thinking?

is it ok if this is a club in bellarmine and i choose some winners from the competition to join a separate company i make called local launch?

That's a really thoughtful question, and I appreciate you asking before moving forward!

Here's what the guidelines say:

The club itself cannot be an independent business or non-profit. The guidelines are clear that clubs must operate as unified organizations under Bellarmine's structure—they can't function as separate businesses.

However, what you do *outside* of the club is different. Here's how to think about it:

What's NOT allowed:

- Running Local Launch Club as a business during club time

- Using club resources, meetings, or Bellarmine's name to operate your business
- Requiring club members to join your company
- Mixing club activities with business operations

What you CAN do:

- Start a separate company called Local Launch *outside* of school
- Invite competition winners (or anyone) to join your company as a separate, optional opportunity
- Keep the two completely separate—club is educational/service, company is your independent venture

The key: The club must remain focused on learning and service (aligned with your mission statement). Your company would be a separate thing that some members might choose to participate in outside of club activities.

My recommendation: Talk to Mr. Dutton and the Servant Leadership Coordinator about this to make sure you're handling it appropriately. They can help you navigate the boundary between the educational club and your entrepreneurial goals.

Does that make sense? What are your thoughts?

that's exactly what i'll do, thanks for the clarification

You're welcome! That's a smart approach—keeping the club focused on education and service while pursuing your entrepreneurial goals separately shows real maturity and understanding of the guidelines.

Alright, let's wrap this up!

You've done excellent work developing a comprehensive plan for Local Launch Club. Here's what you've created:

- ✓ **Mission Statement:** Clear and purposeful
- ✓ **5 Core Goals:** Specific and measurable
- ✓ **Leadership Structure:** Collaborative with defined roles
- ✓ **Year-Long Timeline:** Detailed week-by-week plan
- ✓ **Video Application:** Complete script and shot list
- ✓ **Club Day Strategy:** Recruitment plan with form and booth setup
- ✓ **Documentation System:** Organized and compliant
- ✓ **Funding Plan:** Understanding of resources and rules

Your Next Steps:

1. **Talk to Mr. Dutton** - Confirm he'll be your moderator and discuss your plans (especially the business/club boundary)
2. **Create your video** - Gather visuals and produce your 1-2 minute trailer
3. **Submit your application** - Include all the planning we've done
4. **Prepare for Club Day** - Create your Microsoft Form, QR code, and materials

Do you have any final questions, or is there anything you'd like to revisit before you move forward with your application?

no thats it for me

Awesome! You've put together a really strong, well-thought-out plan for Local Launch Club. Your combination of technical skill-building, real-world service, and servant leadership principles is exactly what Bellarmine is looking for.

Best of luck with your application and the launch of Local Launch Club in September 2026! You've got a solid foundation, and I'm confident you'll make a great impact on both students and local businesses.

If you need any help refining things as you move forward, feel free to come back. Now go make it happen! 🚀
